Objective

Final-semester BA in Computer Science student at New Mexico State University, specializing in systems programming. Seeking an entry level software engineering role where I can leverage my experience building practical apps to create reliable solutions.

Education

New Mexico State University – Las Cruces, NM

Bachelor of Arts, Computer Science — *Expected December 2025*

Relevant coursework: Algorithms and Data Structures, Operating Systems, Database Systems, Software Engineering, Machine Learning, Computer Networks

Experience

Front Desk Associate, Bionic Barbell – Las Cruces, NM

January 2024 – Present

- Provided customer service to members — handling check-ins, membership sales, and inquiries.
- Managed front desk operations including membership management and point-of-sale transactions using gym management software.
- Developed strong communication and problem solving skills.

Projects

PennysWorth – Financial Prediction Software

- Designed algorithms to identify trends and forecast price movements using statistical models.
- Built services to ingest live market data, preprocess it and generate predictions.
- Created a UI to allow selection of assets and draw charts of predicted versus actual price action.

Conversational Journaling App

- Created a mobile journaling app aimed at lowering the threshold for daily journaling by presenting entries as a conversation.
- Implemented a chat-style interface and integrated AI-driven replies that act as prompts.
- Focused on privacy, providing secure authentication and encrypted user data.

SKU Price Scanner

- Built an application that scans online retailers for the best price on a product given its SKU, returning real-time price comparisons.
- Implemented web-scraping and API integrations to fetch pricing data from multiple sources with caching and concurrency controls.
- Deployed the service to a cloud platform to ensure scalability and minimize latency.

Skills

Programming: Python, JavaScript/TypeScript, Java, C/C++, Go, SQL, Bash

Frameworks & Tools: Node.js, React, Next.js, Express, Git, Linux, Docker, RESTful APIs

Concepts: Algorithms and data structures, operating systems, concurrency, machine learning, database design, software architecture
